Leandro Dal Molin

Web Developer

Profile

A web developer with experience building websites for local businesses and golf clubs throughout UK using an array of technologies like PHP, MySQL, Javascript, HTML and CSS (Sass).

Professional Experience

Web Developer, *Artworking/Golfworking* ⧉
Feb 2018 – present | Bristol, UK

Artworking/Golfworking is a small but busy web design and development company, specialised in building websites for golf clubs with clients throughout UK and Ireland.

- Convert website mockups (photoshop files) into responsive websites compatible with all devices resolving cross-browser issues for Safari, Firefox, Chrome and Internet Explorer using Modernizr and Browserstack.

- Build new websites in Wordpress making use of Custom Post Types and Advanced Custom Fields to meet clients' requirements, keeping at minimum the use of external plugins to prevent security flaws and using caching, code-splitting, lazy-loading and Webp images to improve performance.

- Make use of Webpack as module bundler to pre-process and minify different files such as Javascript and SASS files, improve performance (code-splitting and lazy-loading) and productivity (Hot Module Replacement). Still working with Gulp and Codekit in older websites.

- Worked with the team creating a Wordpress boilerplate (theme + libs) used as base for new websites taking less time to build and giving them more layout flexibility.

- Collaborate in the continuous improvement of our Wordpress boilerplate following OOP principles, clean code and refactoring legacy code to fit modern patterns (e.g.: use of ES6 features).

- Daily maintenance of code on existing websites, debugging issues and solving clients problems (including websites using old company's CMS in PHP).

- Worked in a parent/child theme for Wordpress where a group of 6 websites shared features and styles through a parent theme. Updates applicable to all websites are done via parent theme and deployed all at once taking less time maintaining them.

- Use Bitbucket for project version control.

- Coaching and mentoring junior and mid-level new starters.

Technologies and tools: Javascript (ES5/6), jQuery, HTML, CSS (Sass), Gulp, Webpack, PHP, Wordpress, MySQL, Photoshop, Bitbucket.
